

Work Progress Report

Name: Ishimwe Serge

Position: Frontend Developer

Date: 10th June 2025

Introduction

Today, I completed the final piece of the listing update system on the Rent By Aby platform — the ability for hosts to change or update the images of their listed houses and vehicles. This wraps up the full editing experience on the frontend side.

What I Worked On

Feature: Completed Image Update Functionality

I finalized and tested the image update feature, allowing hosts to replace existing images with new ones for both house and vehicle listings.

Key features:

-  Upload and replace images from the host dashboard
-  Real-time preview of the new image before saving
-  Validation checks for file size and format
-  Smooth UI flow that confirms the change with success messages
-  Fully responsive design that works on desktop and mobile

This gives hosts full control over how their listings look, ensuring they can always present their properties and vehicles in the best possible way.

Challenges I Solved

- Handled file upload edge cases like unsupported formats and large files
- Ensured new images are linked to the correct listing

- Optimized the update flow for a smooth and user-friendly experience

Summary of Progress

- ✓ Image update now fully functional for both houses and vehicles
- ✓ Feature includes preview, validation, and confirmation
- ✓ Hosts now have full control over both content and visuals of their listings

This was the last step in making the host listing system fully editable and self-managed.
