Introduction

This report outlines the tasks I completed today, Saturday, June 7, 2025, as part of improving the **Rent By Aby** app. My main focus was on strengthening the app's security features, especially refining the lock screen so that it only appears when a host's account is actually locked.

Key Tasks Completed

1. Improved Loading Experience

I enhanced how the app handles loading times by replacing spinning icons with more modern and user-friendly placeholders.

- Added soft, blinking gray boxes on the top bar to show loading states for welcome messages, search inputs, and user images.
- These skeleton placeholders make the app feel smoother and more professional.

2. Added a Post-Signup Info Form for Hosts

To ensure host profiles are complete, I created a page that prompts them to enter more details if they skipped them during signup.

- Hosts can now input their birthday, city, province, country, ID number, and a short bio.
- The form validates required fields and shows error messages if anything is missing.
- It's fully responsive and supports proper date formatting.

3. Built a Host Profile Page

I developed a profile page where hosts can view and edit their personal details.

- Displays full host information in a clean, organized layout.
- Includes an “Edit Profile” button that opens a modal (styled in green) for quick updates.
- After submitting changes, users get clear success or error messages.

4. Enhanced the Lock Screen Feature

I strengthened the lock/unlock experience to ensure it works as intended and adds a layer of security.

- Hosts can lock their account from the dropdown menu, which redirects them to the lock screen.
- The lock screen now only appears if the account is truly locked—otherwise, users are taken directly to their dashboard.
- After three incorrect password attempts, access is blocked for 30 seconds with a visible countdown timer.
- I added a shield icon and a green background to improve design and clarity.
- If the account is locked, restricted pages (like profile or dashboard) are blocked until the user unlocks their account.
- Cleaned up the lock screen logic to make it more reliable and easier to maintain.

What's Next

- Start building the feature that allows hosts to list properties for rent.
- Design and implement a dashboard for hosts to manage their listed properties.

Summary

Today's work focused on improving user experience and security in the **Rent By Aby** app. I enhanced the loading visuals, added a post-signup form, built a full profile page for hosts, and

refined the lock/unlock functionality for better protection. These updates aim to make the app safer and more pleasant for hosts. Next, I'll begin developing the property listing features.

Thank you for your support—excited to keep pushing this project forward!
