

Property Rental System

Host Table Attributes - Data Specification Report

Purpose

This document outlines the required attributes for capturing information about hosts in the Property Rental System. It includes fields that support both individual hosts and organizations.

Table: Host

Field Name	Description
<code>host_id</code>	A unique identification number assigned to each host.
<code>full_name</code>	Full name of the host, whether an individual or a company representative.
<code>phone_number</code>	Contact telephone number for communication.
<code>email</code>	Email address used to reach the host.
<code>city</code>	City of residence or city where the company is based.
<code>country</code>	The country where the host resides or the company is located.
<code>is_organization</code>	Yes/No – Indicates whether the host is an organization or an individual.
<code>organization_name</code>	Name of the company (if applicable).
<code>status</code>	Current activity status of the host (active/inactive/suspended).

Note

These attributes are required during the initial registration or data entry phase of a host into the system.
